Hydraulic actuators produced by HYDRO ZNPHS are designed for hydraulic drives of machines and equipment, both stationary and mobile ones. We offer a wide range of hydraulic cylinders with various mounting types, diameters and force. Our assortment includes welded, screwed and compact cylinders, optionally equipped with proximity switches and... position transducers. According to client's needs, actuators may be painted with selected colour or covered with protective tin or zinc coating. The quality is not a subject of compromise to us - all materials used in production process are certified, and the seals for cylinders are delivered by world-leading companies, such as Guarnitec, Trelleborg, Freudenberg Simrit. All hydraulic cylinders manufactured by HYDRO ZNPHS are provided with a quality certificate and warranty. We invite you to see our products! Type HCDU - compact design Components for production of hydraulic cylinders Partners About usOur principlesWhy HYDRO?QualitySponsorshipExport HYDRO ZNPHS Sp. z o.o. was established in 1988 in Bielsko-Biala, Poland. From the beginning the company was focused on the production, sale and repair of power hydraulics components. Years of experiences and customers requirements have contributed to the gradual development of our business. As a result the company founded with really small capital and without any place of business, currently takes 15000 m2 of usable area and employs 120 people. Nowadays HYDRO focuses its business on sale and manufacturing of the power hydraulics components. Consistent development policy led to high level of sales and make Hydro to be a leader on the Polish market. Established contacts with well-known and respected leaders in the hydraulic world (IMM HYDRAULICS, ATOS, MP FILTRI, EUROSODI, GEMELS, BLB, GUARNITEC, VIVOIL, CAST, STUCCHI, TRANSFER OIL, and many others), the intensive and hard work, technical progress have contributed to make our customer service faster and more professional, with the guarantee of the highest quality. The very good knowledge of the products sources, direct access to producers and the long-term cooperation with them allow HYDRO to provide high quality goods at very competitive prices. During 35 years the staff of our company has become matured, stable and professional in each department of company. It should be noted that HYDRO has: experienced and qualified staff in each production unit, reliable and efficient service in all warehouses, professional and flexible staff in technical and sales departments, own construction department, which enables technical advice and satisfaction of individual customers needs, professional and responsible administration department. Hydro is a company which constantly invests in expanding infrastructure, in developing IT solutions and modernizing machinery park. Each new investment is made to improve the technical level of customer service and to offer the highest quality product and service. Hydro is a reliable partner who provides both hydraulic components as well as complete systems. Our company has the quality certificate ISO 9001:2015-10. Confirmation of care for the environment is certificate ISO 14001:2015-09. We warmly welcome you! TTS - TTS/L - TTS/AI - rod seal The TTS is indicated as a rod seal and made of polyurethane Tecolan. This sealing element meets high requirements of working in hard conditions. Material: Polyurethane (Tecolan) / Polyurethane (Tecolan) + POM (TTS-L-AI) Temperature: -35C +100C / -45C +110C (PN 522 version) Pressure: 400 bar Speed: 0,5 m/s Ask about product: TTS is indicated as a rod seal and produced of polyurethane Tecolan. This sealing element meets high requirements, such as: flexibility, low deformation and excellent abrasion resistance. The seal design allows the TTS achieve high performance level necessary to operate in the hydraulic cylinders in various applications. The TTS/L version is a double lip rod seal designed for applications where high friction occurs - such as telescopic cylinders. The TTS/AI version is reinforced with an anti-extrusion ring that maintains operating level when extreme conditions of extrusion, high pressure and mechanical coupling are particularly aggressive. For more information see technical data below. Technical data: Rod seal TTS - TTS/L - TTS/AI Catalogue: Seals for hydraulic In our offer we have a whole range of high quality hydraulic valves. We offer valves, flow regulators and components of proportional hydraulics from manufacturers such as: Atos, Gemels, Danfoss. ATOS is one of the world leaders in the power hydraulics solenoid valves industry. Since 1996, together with the ATOS brand, we have been a supplier of components for manufacturers of machines used in many industries. We offer a wide range of hydraulic valves from the world-famous Italian brand GEMELS, of whom we are the exclusive distributor in Poland. GEMELS was founded in 1969, and their products are characterized by high quality and reliability, which is confirmed by certificates and tests. GEMELS valves are made in accordance with commonly used European standards and are fully interchangeable with most valves of other brands. Our offer is complemented by the range of Danfoss (formerly Comatrol), specializing in cartridge hydraulics (valves and flow regulators of various types) and complex solutions in the form of Integrated Valve Blocks (IIC). In 2019, Comatrol became part of the Danfoss group, a leader in technology not only in the hydraulics sector. Cooperation with Danfoss allows us to offer our customers advanced power hydraulics solutions. For years, we were the exclusive representative of the MTC brand, which Walvoil acquired. We offer replacements and equivalents of these valves. Thanks to many years of direct cooperation with producers, we are able to offer valves in very attractive prices, and most of items is available straight from our stock. In case of not standard items or large wholesale orders, delivery time is max 5 weeks (much shorter than from other suppliers). Because of the rich offer of standard valves (various types) and some less common products, we can handle even the most special requirements and orders from individual customer and wholesalers. The biggest advantages of our company are: attractive prices, high quality of products, immediate availability of most products, untypical orders in short time of realization, friendly approach to Customers. We invite you to check our products! See a Catalogue of hydraulic valves (PDF, 18 MB). Mounting sublates and manifolds Steering units used in wheel steering systems in low-speed vehicles check the details Hydrostatic steering units Hydraulic accumulators allow for a considerable accumulation of energy within confined spaces in hydraulic circuits and spending it according to the needs. Its function is similar to the spring in mechanics or condenser in electric. The most popular hydraulic accumulators applications: accumulating and spending energy (pressure and flow) in the different phases of the cycle of hydraulic circuit, emergency energy source, pulsation and hydraulic shocks damper, volume and pressure compensator, hydraulic spring, fluid separator (transferring the energy). Hydraulic accumulators allow for: lowering the cost of maintenance, lowering the pulsation and the noise, working improvement, extending life cycle period free from breakdowns. In 2009 we started cooperation with EPE Italiana, the company which launches its products on the market under EPOLLS brand. Our offer includes: hydraulic diaphragm accumulators, hydraulic bladder accumulators, hydraulic piston accumulators, safety blocks, accessories for checking and filling the accumulators, additional gas bottles, accumulator stations, accumulator clamps and support rings.
